Vulnerabilities in CI/CD pipelines are now exploited at 0-day pace backdoors detected.

Recent breaches of Trivy and KICS by TeamPCP exploit new obfuscation techniques called litellm. Malicious updates contain credential harvester code and Kubernetes lateral movement kits, pushing actors closer to codebase takeover.

This puts open-source tool security front and center. Trivy and KICS are compromised. How will you secure your pipeline?

Patch vulnerable packages. Immediately. Implement a SIEM. Automate response with SOAR.

What are you waiting for? #OpenSourceSecurity #SupplyChainRisk #TrivyCompromise NO GLYPH Source: https://thehackernews.com/2026/03/teampcp-backdo
