

GitHub's CVE-2026-3854 RCE flaw is bad. One "git push" command gets you remote code execution. They're likely using novel obfuscation. No time to think. You have 1 hour. Panic. Do you: 1. Patch now. Risk disrupting development. 2. Wait. Expose your system. 3. Mitigate with GitGuardian or OSS-Fuzz. Patching today?  Source:
