

****Breach happens****. Miasma Supply Chain Worm hits 73 Microsoft repositories. It originated from a compromised GitHub account. Same account was used in a previous Miasma attack.

No one is safe. **Zero-Trust** architectures and **SOAR** systems help. We saw a client fall victim to a similar attack. No **IOC** monitoring. No **TTP** analysis. Easy target.

Supply chain attacks are not rare. They happen to anyone. Miasma Supply Chain Worm is proof. 73 Microsoft repositories breached. Sensitive info exposed.

It's hard to detect. **Code obfuscation** and **anti-debugging** make it tough. Use **GitHub** and **GitLab** to monitor activity. But you need a solid security strategy.

NO GLYPH Tool Recommendation: **GitHub**.
Advanced security features. Monitoring capabilities.

No strategy? You're at risk. Will you choose **100% visibility** or accept **60% risk**? #SupplyChainSecurity #Cybersecurity #ZeroTrust [REDACTED] Source:
