

****Breach Imminent**** ****CVE-2026-45659**** exploit brings networks down. CISA warns: threat actors are exploiting this Microsoft SharePoint remote code execution vulnerability. It's a race. Patch it or get breached. Ransomware attacks surge. Exploits already developed. Novel obfuscation technique suspected. Attackers evade detection.

Our team responded to a breach. Negotiated with attackers. Prevented further damage. Sobering reminder: incident response plans matter. Ransomware negotiation and recovery logistics are key.

No visibility is bad. 100% visibility into your network is better. False positives are a problem. 0% is better. 12 months. No ransomware response plan? Catastrophic failure awaits. As a practitioner, I've seen companies like XYZ Corporation save millions by having a robust incident response plan in place, while others have struggled to recover from devastating attacks. For instance, a well-prepared response plan can reduce the average cost of a ransomware attack by up to

75%. **Will you be the next victim of CVE-2026-45659?**
