

****Zero-Day Hit**** We had 12 minutes. What's the cost of delayed patching? It's exfiltration. ****Shift-Left**** and ****DevSecOps**** are not buzzwords. They make or break security posture. I recall a ****CVE-2026-29**** vulnerability in ****cPanel**** and ****WHM****. Attackers use ****Out-of-Bounds Read**** to leak process memory. Like the ****Ollama**** vulnerability. We use ****SIEM**** and ****SOAR**** for threat detection. Automated response is key. Last week, we detected a potential ****Zero-Day**** exploit. False positive,
