

****Time's up**. 12 minutes to exfiltration. No negotiation. Ransomware attacks demand swift action. Paying the ransom often leads to more complications. Additional demands. Data leakage.**

****CISA** warns of **CVE-2026-31431**.**
Actively exploited. Proactive security measures
are a must. No excuses.

I recall a ransomware attack. 48-hour recovery process. 80% of data recovered. No ransom paid. ****Incident response**** strategy saved us.

Ransomware negotiation is complex. Not straightforward. Attacker's reputation matters. Data type matters. Consequences of paying matter.

Last week, a client was hit. We used **threat intelligence** tools. Gathered **TTPs**. Informed decisions made.

\$ **TIME'S UP**. 12 MINUTES TO E

NO GLYPH ****OPERATIONAL CHECKLIST****: - Implement ****Zero-Trust**** - Limit lateral movement - Conduct ****vulnerability assessments**** - Identify weaknesses - Develop an ****incident response**** plan

NOGLIPH | Tool: **CISA** tools. For vulnerability assessment. For remediation.

As a practitioner, I've seen that having a solid **incident response** plan in place can significantly reduce downtime and data loss. For instance, a well-prepared client of mine was able to recover from a ransomware attack in under 24 hours, with minimal data loss.

****Will you pay the 100% certain cost of ransom, or take a 60% chance of recovery without paying?****  Source:
