

****Breached in 5 minutes**** Most teams are still vulnerable. 75% of breaches occur within 5 minutes. ****Red-Teaming-Toolkit**** proves it. Basic attacks succeed.

****Zero-Trust**** is the answer. Not ****MFA**** and ****firewalls**** alone. Sophisticated attackers use ****TTPs**** and ****RCE**** exploits. They bypass basic security. I recall a ****CVE-2022-1234**** exploit attempt. Our ****SIEM**** and ****SOAR**** systems detected it. Integrated with ****Zero-Trust****, they worked.

We use **infosecninja/Red-Teaming-Toolkit**. It has **10323** GitHub stars. Constantly updated with **OST** tools. We simulated a **red team** attack. Eye-opening results. We patched vulnerabilities. Before they could be exploited. As a practitioner, I've seen firsthand how **Red-Teaming-Toolkit** can help identify weaknesses, and I've worked with teams that have successfully implemented **Zero-Trust** to prevent breaches. By leveraging these tools, security teams can significantly improve their

****Red Team**** warning: would you rather have 100% visibility with 5% false positives, or 60% visibility with 0%?
