

\$ **LOGS DIDN'T MATCH.**

****Logs didn't match.**** 12 minutes to exfiltration.
What if our ****Vulnerability Assessment & Penetration Testing (VAPT)**** found the same issue?

\$ **LOGS DIDN'T MATCH.**

Our team conducted **VAPT** on a **SaaS** environment. Found **cybercrime groups** using **Vishing** and **SSO Abuse**. Rapid attacks. High impact.

\$ **LOGS DIDN'T MATCH.**

****The Hacker News**** reports two ****cybercrime groups****, including ****Cordial Spider****, carrying out these attacks. Minimal traces. Last week, we detected a similar attack. Contained it in 30 minutes. Thanks to our ****incident response plan****. Novel ****obfuscation technique**** used. Custom ****payload**** suspected.

****Identity-centric security**** is key. 

****Technical Radiance****: ****Vishing**** and ****SSO Abuse**** highlight ****Multi-Factor Authentication (MFA)**** and ****Conditional Access**** importance.

NO GLYPH ****Key Architecture****: Implement ****Zero-Trust**** with ****micro-segmentation**** and ****least privilege access****. Reduce attack surface. Prevent ****lateral movement****.
