

****Ransomware hits** 15,000 WordPress sites compromised. **SocGholish botnet** takedown reveals urgency. Patch it or get breached.**

Our team learned the hard way: paying ransom doesn't guarantee data recovery. Attackers demand more. No guarantee. Backups are key.

CVE-2026-4020 vulnerability is the issue. Novel obfuscation technique used. Difficult to track.

Last week: Gravity SMTP WordPress plugin exploited. 100,000 sites at risk. We contained damage. But API keys exposed. Secrets management is crucial. No, it's essential.

NOGLIPH ****Burp Suite**** helps. Advanced vulnerability scanning. Identify and remediate vulnerabilities.

No plan? You're at risk. Catastrophic data loss. Invest in backups. Invest in secrets management. Don't negotiate with attackers. **90% of businesses will be breached in the next 2 years if they don't prioritize cybersecurity**
