

****Vulnerable Devices**** 100% of A12 and A13 chip-based devices are affected. ****usbliter8**** exploit is unpatchable. Fix it. Security teams face a daunting task. Single successful attack: 90% of Apple devices compromised.

Our team encountered a similar issue.
Unpatchable exploit in a third-party library.
SIEM system overwhelmed. False positives increased. Average cost of a single breach: \$3.5 million.

****Shift-Left**** security practices matter. Integrate security into every development stage. Reduce vulnerability risk. ****DevSecOps**** principles are key. Mean time to detect (MTTD) reduced by 50%. Mean time to respond (MTTR) reduced by 70%.

They're using novel obfuscation techniques. Evasion of traditional security controls. **Zero-Trust** models are bypassed. Proactive security approach is necessary. Automation. Visibility. Collaboration.

---  **Jenkins** is our tool of choice.

Automation capabilities are strong. **SIEM** system integration is tight.

No choice. Adopt **Shift-Left** security practices. Or get breached. 100% visibility or 60%? **Will your organization be the next to fall?** #DevSecOps #ShiftLeft #AppleSecurity
