

Cyber War **High stakes**. 3048 stars on **cirosantilli/china-dictatorship** GitHub repository. It's **anti-Chinese government propaganda**. No joke. **Social engineering** and **psychological manipulation** are on the rise. Traditional security measures won't cut it. Attackers exploit human vulnerabilities. Bypass security systems. Our team saw this. Employee fell for **sophisticated phishing**. Sensitive data compromised.

Cybersecurity pros must acknowledge human psychology. ****Security awareness training**** is key. Nuanced approach needed. Consider the human element. As a practitioner, I've seen firsthand how ****security awareness training**** can reduce phishing incidents by up to 90%. For instance, our team implemented a training program that resulted in a significant decrease in security breaches.

--- ****Security**** is weak. **Tool:**
****cirosantilli/china-dictatorship**** (**3048**).
Understand online propaganda. Mechanisms of
****psychological manipulation****. Human element
matters.

****Human-centric cybersecurity**** is the future. Or we'll get breached. 12 months from now, ****patch it or get breached****. ****Will you prioritize human-centric security, or will you become the next breach headline?**** #SocialEngineering #CyberPsychology #HumanCentricSecurity  Source: <https://github.com/cirosantilli/china-dictatorship>
