

****Zero-Day Alert**** Microsoft patches 622 flaws. Two zero-days are under active attack. 134 patches are critical. ****Supply chain attacks**** are a concern. Attackers exploit weaknesses in hardware and software. They evolve constantly. No system is safe.

Our team encountered a sophisticated attack. It leveraged a ****Microsoft-signed UEFI shim**** vulnerability. This highlights the need to scrutinize secure components. Hardware security is often neglected. Despite being critical. The recent discovery of 11 old ****Microsoft-signed Linux UEFI shims**** is a reminder. These shims can bypass Secure Boot on most systems.

We use the ****microsoft/agent-governance-toolkit****. It enhances security governance and enforcement. Policy enforcement is key. Zero-trust identity is essential. Execution sandboxing is vital. Reliability engineering for autonomous AI agents is necessary. 

****microsoft/agent-governance-toolkit**** is a must-have. It offers a promising approach. To security governance and enforcement.

---  Tool Recommendation:

****microsoft/agent-governance-toolkit**** ( 4874) ****Will you patch before it's too late?**** #Cybersecurity #ZeroTrust #SupplyChainIntegrity  Source:
