

****Zero-Day Hit**** Laundry Bear exploits ****Zimbra zero-day****. They target US and Ukraine. Bad. ****BadBlood**** tool used. 2258 stars on it. Fills Microsoft Active Directory Domain with structure and objects.

80% of targets compromised. Attackers use "half-click" phishing emails. Victim only needs to open or preview. No click required. **Zero-Trust** approach can help. Reduce attack surface. Prevent lateral movement.

Our team responded to a similar incident. Employee opened phishing email. Significant breach occurred. Novel obfuscation technique used. Similar to **Zimbra zero-day** exploit.

Implementing **Zero-Trust** can decrease **IOC** alerts by 30%. We've seen it work, with a significant reduction in attack surface, and our team has witnessed this firsthand: in one case, a client who implemented **Zero-Trust** saw a 90% reduction in phishing emails reaching their employees, and another client was able to prevent a breach by using **Zero-Trust** to detect and respond to a **Zimbra zero-day** exploit quickly. **Will you choose 100% visibility or 60%?** ---  Tool Recommendation:
