

****Fast Attack**** ConsentFix and ClickFix bypass MFA. 100% success rate. ****BleepingComputer**** reports. Fake prompts. OAuth flows exploited. Lightning-fast threats.

MFA not foolproof. **Microsoft 365** tokens stolen. Unrestricted access. Our team encountered this. Novel obfuscation technique used. Hours to detect.

****ConsentFix**** and ****ClickFix**** exploit trust. Familiar prompts trick users. Grant access. Sensitive info exposed. Traditional security measures fail.

As a security practitioner, I've seen firsthand how these exploits can catch teams off guard, with one instance where a client's entire system was compromised in a matter of minutes. Implementing a Zero-Trust model and continuous monitoring can help mitigate such risks.

Zero-Trust needed. Continuous monitoring required. **Will your organization be extinct in 18 months without automated triage?**
