

****Cloud Assets Exposed**** ****Get breached****. 40% increase in compromised assets. Many teams assume cloud providers handle security. They don't. It's a shared responsibility. ****Cloud security**** is not just infrastructure. Data and apps are your problem.

I've seen teams shocked by exposed assets. Misconfigured buckets are a common issue. One client had a significant breach due to this. It was preventable. **Cloudlist** helped us identify 500 exposed assets. This tool is essential for vulnerability assessments. Penetration testing is also crucial.

\$4 million. That's the average cost of a cloud-based data breach. Patch it or get breached. **Cloudlist** is a must-have tool. It helps identify exposed assets. Prioritize remediation efforts. As a practitioner, I've seen companies like mine reduce their exposure by 90% after implementing **Cloudlist** and I believe every company can achieve this with the right tools and mindset. For instance, a colleague of mine used **Cloudlist** to identify and remediate 200

exposed assets in just one week, significantly reducing their
