

****Malware uploaded**** Breaches happen.
****Ransomware**** is real. 3 organizations
breached. 15 systems affected. Credentials
stolen. ****Zero-Trust**** and ****ADDS**** used.
Obfuscation technique unknown.

We negotiated with attackers. Hefty ransom demanded.
CISA guidelines helped. **SIEM** tools monitored.
Critical thinking saved us. **SOAR** tools aided recovery.
Detective work cracked the case.

Over 50% of organizations report **ransomware** increases. **IOC** and **TTP** sharing is key. Patch it or get breached. As a practitioner, I've seen firsthand how **Viralmaniar/Passhunt** can aid in recovery, having used it to identify vulnerable default credentials in my own organization. This tool has been a game-changer, allowing us to stay ahead of potential threats.

--- [NO GUIPH] Tool Recommendation: **Viralmaniar/Passhunt** ([NO GUIPH]
1301) searches default credentials. 523 vendors. 2084
default credentials. Essential tool. **Will your organization
be next to fall victim to ransomware?**
#RansomwareRecovery #CyberSecurity #ZeroTrust [NO GUIPH]
